

# BATÀ

8-Channel Passive Vactrol LPG/Mixer

**BATÀ** is an 8-channel passive vactrol VCA/LPG. It can be used as a signal mixer since each output is normalized to the next one. In this configuration the modulation - V input - of each channel is not mixed, only the outputs are combined.

Since the module is passive, it attenuates naturally the outputs at approximately line level.

## features:

- 2 VCA - voltage controlled attenuators 0 to 1
- 2 distinct first order LPG
- 2 distinct second order LPG - medium attenuation
- 2 third order LPG - heavy attenuation
- Signal combiner and mixer
- Works both with audio and CV as a inputs

## technical specs:

Current draw ⇒ it doesn't draw current, the module is passive

Dimensions ⇒ width 6HP, depth 28mm
